Rotaract Club of Xiamen University Malaysia

Rotary Club of Kuala Lumpur Dynamics

Rotary Club of Tun Razak Exchange

SDC Hackathon

Technical Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: 25 October 2026, 7:59 AM (MYT)

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

1. TEAM AND PROJECT OVERVIEW

Team Name

Team X

Project / Solution Name

OrderWeaver

Name (Leader)

Liu Shiwei

Email & Phone (Leader)

SWE2609037@xmu.edu.my&+60 1123187767

University Affiliation(s)

Xiamen University Malaysia

Live Prototype URL

https://order-weave.replit.app

Code Repository URL (public / access granted to judges)

https://github.com/caozheyu780/OrderWeave

2. ARCHITECTURE & TECHNOLOGY STACK

2.1. System Architecture Overview

Describe how the components declared in this document connect end-to-end (e.g., user interface → backend → AI model/API → database → cloud hosting). Attach a system block diagram as an appendix if available.

[Maximum 200 words]

OrderWeave is a web prototype for small food businesses. Its browser interface supports menus, buyer ordering, merchant approval, batch order review, kitchen preparation lists and activity logs. Accounts, menus, orders and logs are stored in browser localStorage, with sessionStorage for tab sessions. Text, spreadsheet and document imports are read locally. When AI extraction is requested, the frontend sends extracted text and relevant menu metadata to a server-side endpoint, which calls the DeepSeek API and validates its structured response. Merchants review uncertain information and confirm orders before saving.

The prototype uses Vinext/Vite and is hosted on Replit.

Its server-side endpoint calls the DeepSeek API with deepseek-chat.

Business data is browser-local and does not synchronize across devices.

Payments are simulated.

2. ARCHITECTURE & TECHNOLOGY STACK

2.2. Languages, Frameworks & Libraries

List the main programming languages, frameworks, and third-party libraries that your team did not create. Open-source use is permitted provided it is declared and properly licensed/attributed.

Name & Version	Purpose in Project	License
JavaScript, HTML and CSS	Browser interface and application logic	Language standards
TypeScript 5.9.3	Typed server and application code	Apache-2.0
React / React DOM 19.2.6	Application page and rendering	MIT
Next.js 16.3.4	Next-compatible structure and APIs	MIT
Vinext 1.0.0-beta.5 / Vite 8.0.13	Runtime, development and build tooling	MIT
SheetJS 0.20.3	Spreadsheet import	Apache-2.0

3. APIs & CLOUD SERVICES

3.1. External APIs

List every external API your solution calls (GenAI, maps, payments, messaging, data feeds, etc.). Do not include API keys or secrets in this document.

API and Provider	Purpose in Project	Access Tier (free / paid / sponsor-provided)
DeepSeek Chat Completions API - DeepSeek	Extract structured orders and menus from text and suggest existing-menu matches for merchant review.	self-funded

3. APIs & CLOUD SERVICES

3.2. Cloud Platforms & Deployment

List every cloud service used for hosting, storage, databases, authentication, or compute, and indicate how the prototype is deployed.

Service & Provider	Purpose in Project	Plan / Region
Replit	Frontend and server-side application hosting.	Published at order-weave.replit.app; provider-managed region.
DeepSeek API	Hosted model inference for menu and order extraction.	Model deepseek-chat; provider-hosted API.
GitHub	Public source-code repository.	Public repository; URL in Section 1.

4. AI TOOLS, MODELS & DATASETS

4.1. AI Models Used in the Solution

List every AI model embedded in or called by your application, including pre-trained, fine-tuned, and self-trained models.

Model & Version	Source / Provider	Usage (pre-trained / fine-tuned / self-trained)	License / Terms
deepseek-chat	DeepSeek API	Pre-trained; API inference only. Not fine-tuned or self-trained.	DeepSeek API terms; accessed through API, not redistributed.

4. AI TOOLS, MODELS & DATASETS

4.2. Datasets

List all datasets used for training, fine-tuning, evaluation, or in the running application. State clearly if a dataset contains personal or sensitive data.

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
Synthetic order-chat examples and automated test fixtures	Team-created project materials, including AI-assisted fictional examples; no public dataset URL.	Synthetic	N - fictional examples only	Team-created demonstration materials ; no external dataset license.

4. AI TOOLS, MODELS & DATASETS

4.3. AI-Assisted Development Tools

Tools used to help write code, design, content, or documentation (e.g., chat assistants, code completion tools, image generators). Declaring these tools does not reduce your score; undeclared use may.

Did your team use any generative-AI tool to help create code, design, text, or other project material?

☐ Yes ☐ No

If yes, list them below:

Tool & Version	Used For	Extent of Use (minor / moderate / major)
OpenAI Codex	AI-assisted implementation, debugging, automated tests, documentation and synthetic test examples.	Major

4. AI TOOLS, MODELS & DATASETS

Briefly describe how your team reviewed, tested, and took responsibility for AI-generated output:

[Maximum 100 words]

AI-assisted outputs were checked using automated regression tests, type checks, production builds and prototype interaction tests. Order extraction is validated against the existing menu and original text. Uncertain results are marked for merchant review, and imported orders are saved only after confirmation. Before submission, team members will review the implementation, verify the declared resources and confirm the final demonstration. The team takes responsibility for the submitted prototype and its outputs.

5. SPONSOR-PROVIDED RESOURCES

Declare any official SDC sponsor-provided GenAI API, cloud credits, tools, mentoring, or data that your team used.

Did your project use any official SDC sponsor-provided resource?

☐ Yes ☐ No ✓

If yes, list them below:

Sponsor	Resource (API / credits / platform / data)	How It Was Used in the Project

5. SPONSOR-PROVIDED RESOURCES

Was the sponsor resource essential to the core functionality of the prototype, or could it be replaced? Explain briefly:

[Maximum 100 words]

Not applicable. No official SDC sponsor-provided resources were used.

6. SECURITY, PRIVACY & RESPONSIBLE USE

6.1. Data Handling & Privacy

What user or personal data does your application collect, store, or send to third-party services (including AI APIs)? How is it protected, and how long is it kept? State "No user data is collected" if applicable.

[Maximum 150 words]

The application can store operator and buyer account information, buyer phone numbers, profiles, delivery addresses, order details, menus and activity logs in browser localStorage. Session data is kept in sessionStorage. Passwords are stored as salted hashes. These local records are not synchronized across devices. Records remain until removed through supported application actions or browser storage is cleared; there is no automatic retention expiry. When a merchant starts AI extraction, submitted text and relevant menu metadata are sent to DeepSeek through a server-side endpoint. That text may contain customer names, contact details and addresses. Imported file images are not sent. API keys are kept in server-side configuration and excluded from source control. Our demonstration uses fictional customer information. DeepSeek processes submitted data under its own service terms.

6. SECURITY, PRIVACY & RESPONSIBLE USE

6.2. Known Limitations & Risks

Identify the main technical limitations of your AI components (e.g., hallucination, bias, rate limits, dependency on a single provider) and any mitigation you have implemented.

[Maximum 150 words]

DeepSeek may misinterpret typos, quantities, dates, preferences or order boundaries. The application validates structured responses, restricts dish suggestions to the existing menu, displays source excerpts and flags uncertain results for merchant review. Merchants can correct results and must confirm before adding orders. Provider outages, rate limits and API costs may affect AI extraction; manual entry remains available. Scanned documents, images, audio and video are not supported for document extraction. Current records are browser-local, so devices do not share data and clearing storage can cause data loss. Business-data exports provide backups. Payments are simulated and no real payment processing is connected.

7. COMPLIANCE & READINESS

Tick all boxes that apply before submitting.

☑ All APIs, cloud services, AI tools, models, and datasets used in the project are declared in this document.

☑ All third-party code, datasets, and models are used in accordance with their licenses, and attribution is provided where required.

☑ No API keys, passwords, or other credentials are exposed in the code repository, prototype, or this document.

☑ Any use of generative-AI tools for development has been disclosed and reviewed by the team.

☑ Any use of official SDC sponsor resources has been declared in Section 5.

☑ The prototype described here is accessible to judges through the links provided in Section 1.

☑ All fields in this template have been completed within the word limits stated.

8. DECLARATION

By submitting this document, the team leader confirms that the information provided is complete and accurate to the best of the team's knowledge, and that every API, cloud service, AI tool, dataset, model, and sponsor resource used in the project has been declared.
